

acoustiguide Opus+

The new multimedia guiding system for unforgettable visitor experiences

It's the latest addition to Acoustiguide's groundbreaking family of Opus multimedia guides. Opus+ features a newly enhanced, visitor-friendly interface and delivers content of any length. With its rugged, ergonomic design, Opus+ is ideal for museums, visitor centers and other public venues where reliability, flexibility and ease-of-use are what you need.

Opus+ can hold more than 500 hours of multilingual audio, multimedia content, and images. With its customizable keypad, enhanced stereo sound, and ability to play video and animation, Opus+ can transform even the simplest visitor tour into a memorable adventure.

Charging the Opus+ player is easy with Acoustiguide's Wireless Charging Cabinet, which can also charge many other multimedia devices. Just place the player into one of the cabinet's nests. There are no fragile connectors to align. Which means you'll save on maintenance, while extending the life span of your players.

Creating, delivering and updating content is simple, thanks to the back-end Content Management System.

User-friendly features include the ability to activate location-based content. You can even synchronize the audio on the Opus+ with your exhibit's in-gallery videos for a totally immersive experience. The kind that Opus+ makes possible.

General Features

Physical Design

- Rugged design is comfortably lightweight
- High quality 2.2" color landscape display, with automatic backlight
- Activates remotely via proprietary, proximity RF technology
